## SLUSHEE MACHINE INSTRUCTION SHEET

### Operating Instructions

1. Make sure the rubber gaskets and bowls are both secure against the back of the Slushee machine. (Small movements can loosen the bowl causing fluids to pour out of the machine.)  
**PLUG INTO OWN POWER SOURCE. MACHINE WILL BLOW AN OVERLOADED CIRCUIT!**
2. Fill the bowls with **small** amount of water only to test the bowl and gasket security. If it leaks, readjust the bowls tightly against the machine. To much and the water will freeze.
3. Set switches (if double) so both left and right sides are in the snowflake [❄️] position, not the drip [💧] position.
4. Fill machine following instructions on Slushee machine, **add flavored mix**. Then add the water (standard ratio is 2 or 3 gallons of water to one gallon of mix or you could also use any flavored soda without water. Add liquor (if needed) now. (Liquor makes it difficult to freeze to maximum capacity.) **For Margaritas and Daiquiris, production is faster when you put the liquor in the cup and then add the frozen drink to it.**
5. Place red slide button on back of the machine to 2/3 to start freezing – do not pull red slide knob!
6. Turn the main power on by pushing down the top two buttons. This will start turning the inside white braces.
7. Machine will not slush up immediately. This process may take about 45 minutes to an hour.

### Cleaning Instructions

1. Empty tanks of contents.
2. Fill both tanks with clean hot water.
3. Turn on Agitator and Power switches only, leave cooler switches off.
4. Flush water through faucet.
5. Repeat 2-4 more times.
6. Clean drip trays and screens with hot water.
7. Wipe outside of machine down with wet towel and dry.

**\*\*\*\* DO NOT USE HOSE TO CLEAN OR SUBMERGE ANY PART OF MACHINE \*\*\*\***

**In the event that the equipment fails, please do not attempt to repair it yourself, instead, please contact the emergency phone number above for further assistance.**
